1 External knowledge
Vulnerability records and taxonomies
Code, patches, and program relations
Reports, advisories, and documentation
2 Task-specific evidence selection
Query: code, question, or intermediate state
Lexical / dense / hybrid retrieval
Graph, repository, or tool-based lookup
Filtering and reranking, where implemented
3 Evidence integration and reasoning
Contextual generation / workflow integration
Feature/model integration
Direct, chain-of-thought, graph,
staged, or multi-agent generation
4 Lifecycle outputs
Discovery: findings and test inputs
Analysis: characterization and verification
Mitigation: recommendations and patches
Optional evidence / validation feedback
